EDUCATION

Carnegie Mellon University — B.S. Computer Science with Systems Specialization 2012 - 2016

- Completed coursework in distributed systems, cloud computing, and network architecture; maintained 3.7 GPA

EXPERIENCE

Stripe — Senior Cloud Infrastructure Engineer Jul 2022 - Present

- Led migration of 450+ payment processing services from Kubernetes 1.18 to 1.28, reducing pod latency by 34% and eliminating \$2.1M annual infrastructure costs
- Architected multi-region disaster recovery solution handling 100K+ transactions/sec, achieving 99.99% uptime SLA across 12 AWS regions with automated failover
- Mentored team of 6 engineers on cloud-native patterns, resulting in 78% reduction in production incidents and 45% faster deployment cycles across platform services

Databricks — Senior Platform Engineer Mar 2020 - Jun 2022

- Designed and deployed auto-scaling Spark cluster orchestration system reducing compute costs by \$4.3M annually while maintaining 98.5% cluster availability
- Implemented comprehensive observability stack using Prometheus and Grafana across 200+ cloud instances, decreasing mean time to detection (MTTD) from 18 minutes to 2.3 minutes
- Led open-source contributions to Apache Spark project, authoring 8 PRs that improved task scheduling efficiency by 26%, adopted by 50K+ daily users

Lyft — Cloud Systems Engineer Sep 2017 - Feb 2020

- Engineered containerized microservices deployment platform handling 2.5M requests/sec across 3K+ AWS EC2 instances, reducing deployment time from 45 minutes to 8 minutes
- Optimized VPC network architecture and implemented custom DNS service, decreasing cross-availability zone latency by 61% and saving \$850K quarterly
- Developed Python-based infrastructure-as-code framework for Terraform modules, enabling 120+ teams to provision cloud resources self-serve, reducing ops tickets by 73%

Twilio — Junior Cloud Engineer Jun 2016 - Aug 2017

- Implemented monitoring and alerting system for 15 production services using CloudWatch and PagerDuty, responding to 340+ incidents with 94% resolution rate within SLA
- Migrated legacy on-premises database workloads to RDS, achieving 55% cost reduction and enabling automatic backups across 8 regions

PROJECTS

Multi-Cloud Cost Optimization Framework — Python, AWS Cost Explorer API, GCP Billing API, Terraform, 2021 - 2022
RI/SP negotiation

- Built automated cost analysis and reserved instance recommendation engine saving 42% on cloud spending across 500+ services
- Implemented real-time billing alerts and chargeback system reducing resource waste by enforcing tagging standards across 8,000+ infrastructure assets

Zero-Downtime Blue-Green Deployment System — Go, Kubernetes, AWS ALB, Helm, ArgoCD 2019 - 2020

- Engineered blue-green deployment orchestrator enabling 50+ service teams to execute zero-downtime releases at 99.97% success rate
- Reduced deployment rollback time from 12 minutes to 90 seconds through automated health checks and traffic shifting strategies

EXTRACURRICULAR

Cloud Native Computing Foundation — Kubernetes Contributor & Reviewer 2018 - Present

- Reviewed and merged 15+ pull requests improving kubelet resource management and reducing memory overhead by 19%
- Co-authored CNCF white paper on multi-cluster networking patterns adopted by 2,000+ organizations

HashiCorp Community — Terraform Module Maintainer 2019 - Present

- Maintained 3 popular open-source Terraform modules with 150K+ downloads, providing enterprise AWS landing zone templates

TECHNICAL SKILLS

Languages – Python, Go, Bash, SQL, YAML, Java

Technologies – Kubernetes, Docker, Apache Spark, AWS (EC2, S3, RDS, VPC, ECS, Lambda), GCP (Compute Engine, BigQuery), Terraform, CloudFormation, Prometheus, Grafana, Datadog

Tools – Git, Jenkins, GitLab CI/CD, ArgoCD, Ansible, Helm, Vault, PagerDuty, Splunk, AWS CloudFormation
