EDUCATION

University of Michigan | *B.S. in Computer Science* 2015 - 2019

- Led the ACM Student Chapter's competitive programming team, achieving top 5 placement in 3 consecutive regional contests with 150+ members mentored
- Contributed to open-source Mozilla Firefox security project, authoring 8 code reviews and improving browser rendering performance by 12%

Coursera & Stanford Advanced Studies | *Graduate Specialization in Cloud Computing & Distributed Systems* 2020 - 2021

- Completed advanced coursework on Kubernetes orchestration and microservices architecture with distinction
- Implemented a Raft consensus algorithm project achieving 99.97% fault tolerance across distributed nodes

EXPERIENCE

Palantir Technologies | *Senior Full Stack Engineer* 2022 - Present

- Architected and shipped a real-time data pipeline framework handling 2.5M+ events/second, improving data latency by 73% and enabling 15 enterprise clients to process 40% more data with same infrastructure
- Led cross-functional migration of monolithic architecture to microservices reducing deployment time from 45 minutes to 8 minutes (82% improvement) and enabling 3x faster feature releases
- Mentored 4 junior engineers on full-stack best practices, conducting weekly code reviews that reduced production bugs by 58% quarter-over-quarter

Cloudflare | *Senior Software Engineer, Platform* 2020 - 2022

- Designed and implemented a distributed cache invalidation system in Go reducing DNS query latency by 47% for 200K+ customer domains globally
- Optimized GraphQL API resolver layer through intelligent batching and caching, decreasing frontend load times by 64% and reducing database query volume by 51%
- Drove adoption of infrastructure-as-code practices across 12 teams by authoring Terraform modules, reducing infrastructure provisioning time by 55 hours per deployment cycle

Shopify | *Full Stack Engineer, Fulfillment Platform* 2018 - 2020

- Built React-based merchant dashboard handling real-time inventory synchronization across 800+ warehouses, achieving 99.8% data consistency and supporting \$1.2B in annual GMV
- Engineered Kafka-powered event streaming system processing 500K+ fulfillment events daily, enabling 40+ downstream services and reducing order processing latency by 35%
- Implemented comprehensive integration test suite using Jest and Cypress covering 210 critical flows, catching 92% of production issues before deployment

Figma | *Full Stack Engineer, Infrastructure* 2017 - 2018

- Developed WebSocket multiplayer synchronization engine optimizing concurrent user handling from 50 to 500+ simultaneous editors per document with zero message loss
- Contributed to performance initiatives reducing document load time by 52% through strategic caching and asset optimization across 3M+ design files
- Established monitoring dashboards and alerting using DataDog, reducing MTTR (Mean Time To Recovery) by 43% and improving service reliability to 99.95%

PROJECTS

AsyncFlow | *TypeScript, Node.js, React, PostgreSQL, Redis, Docker* 2022 - Present

- Open-source workflow orchestration library enabling 3,500+ GitHub stars and 120+ enterprise deployments automating complex asynchronous task chains
- Implemented intelligent retry logic with exponential backoff and circuit breaker patterns reducing failed job retry count by 68% and saving customers \$400K+ in compute costs annually

MetricVault | *Python, FastAPI, MongoDB, Elasticsearch, Kubernetes, Grafana* 2021 - 2023

- Built high-performance time-series metrics aggregation platform processing 50M+ data points daily with single-digit millisecond query latency serving 15+ B2B customers
- Scaled database architecture from single-instance to distributed cluster setup handling 12x growth in query throughput while maintaining sub-100ms p95 latency across all operations

SecureVault | *Go, React, PostgreSQL, TLS/mTLS, AWS KMS* 2020 - 2021

- Created end-to-end encrypted secrets management system with role-based access control protecting sensitive credentials for 25+ open-source projects and preventing 100% of unauthorized access attempts

- Implemented AES-256 encryption at rest and TLS 1.3 in transit achieving SOC 2 Type II compliance and reducing security audit findings by 87%

EXTRACURRICULAR

React London Meetup Community | *Technical Lead & Speaker* 2021 - Present

- Organized monthly meetups attracting 200+ full-stack engineers and delivered 6 talks on distributed systems and performance optimization reaching 5K+ online viewers
- Mentored 12 junior developers transitioning into senior engineering roles, with 100% of mentees securing senior positions within 18 months

HackTech Summit & Open Source Contributor | *Hackathon Judge & Maintainer* 2019 - Present

- Judged 8 international hackathon events evaluating 500+ technical projects and contributed 47 merged pull requests to Kubernetes ecosystem improving container orchestration reliability
- Spoke at 3 technical conferences (ReactConf 2023, DevOps Days EU, Node Summit 2022) on microservices architecture to audiences totaling 2,000+ engineers

TECHNICAL SKILLS

Languages – TypeScript, Python, Java, Go, SQL, GraphQL

Technologies – React, Node.js, Next.js, FastAPI, PostgreSQL, MongoDB, Redis, AWS, Docker, Kubernetes, Elasticsearch, Kafka

Tools – Git, GitHub Actions, Terraform, DataDog, Jenkins, Webpack, ESLint, Cypress, Jest, Postman
