EDUCATION

ETH Zurich (Swiss Federal Institute of Technology) | *MSc Computer Science (Mobile Systems & Distributed Computing)* 2017–2019

- Thesis on real-time iOS networking optimization: reduced cold-start latency by 340ms across 50K+ concurrent connections using custom socket buffering—published in ACM MobiSys workshop
- Dean's Honours (GPA 3.89/4.0); Chair of ETH Mobile Development Club—grew membership 240% (45 → 108 members) and organized 3 hackathons with 180+ participants

University of Toronto | *BASc Computer Engineering* 2013–2017

- Specialized in mobile & embedded systems; capstone: cross-platform Bluetooth LE framework achieving 98.7% connection stability vs. 94.2% industry baseline
- Cumulative GPA 3.82/4.0; recipient of Ontario Engineering Award; competed in ACM ICPC (Top 20 regionals)

EXPERIENCE

Stripe | *Senior Mobile Engineer (iOS + React Native)* 2021–Present

- Led architecture redesign of Stripe's mobile SDK payment processing layer for iOS 14–18 compatibility; reduced transaction failure rate by 12% (2.8% → 2.46%) across 500M+ annual transactions and improved cold-start launch time by 280ms through lazy-loading and code stripping
- Owned cross-platform React Native implementation for Stripe Payment Sheet; drove 34% increase in mobile conversion rates (6.2% → 8.3%) across 50K+ merchant partners, directly contributing ~\$18M incremental ARR
- Mentored team of 6 junior iOS engineers; established mobile code review standards reducing critical bugs by 67% (Q1: 22 issues → Q4: 7 issues); managed sprint velocity improvement from 45 to 78 story points over 8 quarters

Wise (formerly TransferWise) | *Mobile Engineer (iOS Specialist)* 2019–2021

- Redesigned iOS app's real-time FX quote engine using reactive streams (RxSwift); cut UI update latency by 420ms (650ms → 230ms) and reduced battery drain by 31% in foreground usage through optimized refresh intervals
- Shipped multi-currency wallet feature (iOS + Android via Flutter bridge); achieved 89% adoption rate (Day 30 DAU) among 3.2M iOS users; feature generated £4.7M in new cross-currency fees in first year
- Implemented on-device biometric authentication system supporting Face ID, Touch ID, and fallback mechanisms; reduced authentication failure rates by 58% (8.3% → 3.5%) and improved user NPS by 22 points in post-launch survey of 15K users

Figma | *Mobile Engineer (Cross-Platform)* 2019–2019

- Developed Figma's first production iOS app prototype in Swift; optimized canvas rendering achieving 60fps consistency across all iPhone models (XS, XR, 11) with average GPU memory footprint of 186MB vs. 320MB initial implementation
- Built real-time sync engine for collaborative editing using WebSocket + local SQLite; support for 50+ simultaneous remote cursors with <100ms propagation latency (measured via Chrome DevTools frame capture analysis)
- Wrote foundational iOS networking layer with automatic retry logic and exponential backoff; reduced P99 request latency from 1850ms to 680ms and improved endpoint availability from 98.1% to 99.7% during peak load testing (1K RPS)

Shopify | *iOS Engineer* 2017–2019

- Built Shopify Point of Sale (POS) iOS app module for inventory sync; optimized database queries reducing sync time from 12.3s to 2.1s for 50K SKU catalogs; impacted 85K+ retail stores globally

- Shipped payment processing feature supporting 12 payment gateways; achieved 99.2% transaction success rate and reduced average transaction processing time by 340ms through batching and pre-authorization caching
- Led iOS app accessibility audit and remediation; improved WCAG 2.1 AA compliance score from 61% to 94%; directly enabled 120K+ users with visual/motor impairments to access platform

PROJECTS

MotionSync | *Swift, SwiftUI, CoreAnimation, Metal, Firebase* 2020–2021

- Open-source iOS animation library for synchronized multi-device interactions; 2,847 GitHub stars, 12.3K weekly downloads on CocoaPods; featured in Ray Wenderlich's 'Best iOS Libraries' (2021)
- Benchmarked 140% faster frame render time vs. CABasicAnimation baseline through Metal-accelerated interpolation; maintained 60fps across iPhone SE to iPhone 13 Pro with <8MB memory overhead

PlatformBridge | *Kotlin, Swift, C++, JNI, React Native* 2020–Present

- Cross-platform native module abstraction library enabling 60% code reuse between iOS and Android codebases without sacrificing performance; 834 GitHub stars, adopted by 18 mid-market fintech companies
- Reduced inter-process communication (IPC) latency from 45ms to 8ms through custom C++ serialization layer; eliminated 3 major memory leak classes affecting long-running background processes

CacheVault | *Swift, SQLite, GRPC, Protobuf* 2021–Present

- Persistent caching framework for iOS with multi-tier eviction policy (LRU + LFU hybrid); 1,456 GitHub stars, 8.9K monthly downloads; 23% faster cold-start vs. standard Foundation URLCache
- Implemented advanced compression using ZSTD codec achieving 73% size reduction for JSON payloads; reduced cloud storage costs by \$42K annually across 6 internal Stripe services processing 340B+ cache objects/month

EXTRACURRICULAR

React Native EU Conference | *Conference Speaker & Workshop Organizer* 2021–2023

- Delivered keynote 'Building Production-Grade Cross-Platform Apps' (500+ attendees, 78K YouTube views); workshop materials downloaded 34K+ times and cited in 12 open-source projects
- Co-organized React Native performance optimization track attracting 180 engineers; post-conference survey: 92% satisfaction rate and 68% reported implementing recommendations within 2 weeks

iOS.dev Community (Open Source Maintainer) | *Core Contributor & Technical Mentor* 2019–Present

- Maintain 3 active Swift libraries with 50+ community pull requests reviewed annually; mentored 12 junior iOS engineers toward first open-source contribution—8 became regular contributors
- Reduced issue resolution time from 14 days to 2.3 days through CI/CD automation and triage guidelines; achieved 97% community satisfaction score (Net Promoter Score) in 2023 survey of 287 library users

TECHNICAL SKILLS

Languages – Swift, Kotlin, JavaScript/TypeScript, Python, Objective-C, C++

Technologies – iOS (UIKit, SwiftUI), React Native, Flutter, Core Data, SQLite, WebSocket, GRPC, GraphQL, Firebase, ARKit, CoreLocation, AVFoundation, Metal

Tools – Xcode, Android Studio, Git, Jira, Jenkins, GitHub Actions, Instruments, Figma, Proxyman, Charles Proxy, App Annie analytics, LLDB debugger
