EDUCATION

Technical University of Munich (TUM) | *MSc Computer Science* 2017-2019

- Thesis on distributed systems optimization: reduced latency by 34% in horizontally-scaled microservice architectures
- GPA 3.8/4.0; completed specialization in Cloud Computing and Infrastructure Engineering

National University of Sofia | *BSc Information Technology* 2013-2017

- Graduated top 8% of cohort; focus on systems programming and network infrastructure
- Led systems administration labs for 150+ students; designed curriculum for containerization concepts

EXPERIENCE

Cloudflare | *Senior Site Reliability Engineer* 2022-present

- Led infrastructure modernization initiative serving 200M+ daily requests; migrated 40+ microservices to Kubernetes, reducing deployment time by 67%
- Designed and implemented multi-region disaster recovery system with 99.99% uptime SLA; reduced RTO from 4h to 12min across 8 data centers
- Mentored team of 5 junior SREs; established runbook automation reducing MTTR by 45% on critical incidents

HashiCorp | *Infrastructure Engineer* 2020-2022

- Architected Terraform state management infrastructure supporting 500+ enterprise clients; implemented consistency checks reducing deployment errors by 89%
- Optimized Consul cluster operations across AWS, Azure, GCP; reduced cloud infrastructure costs by \$2.1M annually through auto-scaling policies
- Built CI/CD pipeline using Vault for secrets rotation; achieved zero-knowledge secret distribution across 1200+ nodes

Stripe | *SRE (Platform Infrastructure)* 2018-2020

- Managed Kubernetes platform serving \$100B+ annual payment volume; implemented automated capacity planning reducing over-provisioning waste by 38%
- Designed distributed tracing system using Jaeger; identified and resolved 12 critical latency bottlenecks in payment processing pipeline
- Led on-call rotation covering 24/7 incident response; achieved 99.98% API availability maintaining SLA commitments across all regions

Wise (formerly TransferWise) | *Junior DevOps Engineer* 2017-2018

- Automated infrastructure provisioning on AWS using Terraform; reduced manual deployment steps from 47 to 3, cutting deployment time from 90min to 8min
- Built monitoring dashboards with Prometheus and Grafana for 30+ microservices; implemented alerting reducing mean-time-to-awareness by 52%
- Contributed to Kubernetes migration project; containerized legacy payment processing service, improving release frequency from monthly to weekly

PROJECTS

CloudShield - Multi-Cloud Security Orchestration | *Terraform, Kubernetes, Vault, Python, AWS/GCP* 2023

- Built automated security compliance framework for 3 cloud providers; reduced security audit time from 3 weeks to 2 days through policy-as-code
- Implemented 650+ infrastructure policy checks; caught 87% of misconfigurations before deployment, preventing 4+ production incidents

ObserveFlow - Real-time Infrastructure Analytics | *Prometheus, ClickHouse, Go, Apache Kafka*, 2022
React

- Engineered high-throughput metrics pipeline processing 50M+ data points/minute with <100ms query latency at 99th percentile
- Enabled 120+ engineers across company to debug infrastructure issues 5x faster; reduced incident investigation time from avg 45min to 9min

RegionSync - Cross-Datacenter State Management | *etcd, gRPC, Rust, Docker, PostgreSQL* 2021

- Designed state consistency layer supporting eventual consistency model across 15 regions; achieved sub-second convergence with 99.97% accuracy
- Reduced data replication bandwidth by 72% through intelligent compression; saved \$340K annually in egress costs

AlertXL - Intelligent Incident Correlation Engine | *Python, Machine Learning, Elasticsearch, Kafka, FastAPI*, 2020

- Developed ML-based alert deduplication system reducing alert noise by 68%; on-call engineers reported 46% improvement in mean-time-to-resolution
- Processed 2.3M alerts/day with 94% precision in root-cause clustering; prevented alert fatigue across 80+ person engineering team

EXTRACURRICULAR

Cloud Native Computing Foundation (CNCF) | *Kubernetes Maintainer (Release Team)* 2021-present

- Oversee testing and validation for quarterly Kubernetes releases; coordinate quality assurance across 40+ volunteer contributors worldwide
- Published 8 technical RFCs on container orchestration patterns; speaker at KubeCon EU 2022, 2023 reaching 3,500+ attendees

Infrastructure Engineering Meetup - Berlin | *Co-organizer & Speaker* 2020-present

- Grew meetup from 120 to 890 active members; organized 24 technical talks covering observability, infrastructure automation, and incident management
- Mentored 15 junior engineers transitioning into SRE roles through structured 12-week program with 92% completion rate

TECHNICAL SKILLS

Languages – Go, Python, Rust, Bash, SQL

Technologies – Kubernetes, Terraform, Prometheus, Docker, AWS, GCP, Azure, Kafka, gRPC, etcd, PostgreSQL, Elasticsearch, Vault, Consul, Jaeger

Tools – Git, GitHub, GitLab, Jenkins, ArgoCD, Grafana, PagerDuty, DataDog, ELK Stack, Jira, Confluence
