EDUCATION

Imperial College London | *MSc Cyber Security* 2019-2021

- Achieved distinction with 78% average; led secure coding workshop for 45+ students covering OWASP Top 10 and threat modeling
- Thesis on 'Runtime API Monitoring for Zero-Day Detection in Microservices' published as conference paper with 340+ citations

University of Waterloo | *BASc Computer Science (Honours)* 2015-2019

- Graduated with 3.87/4.0 GPA; President of Cybersecurity Club growing membership from 12 to 120+ members over 2 years
- Co-authored 2 peer-reviewed security papers on cryptographic side-channel attacks and supply chain vulnerability analysis

EXPERIENCE

Cloudflare | *Senior Application Security Engineer* 2023-Present

- Led security review of microservices platform processing 25M+ requests/sec; identified 18 critical vulnerabilities reducing CVSS exposure by 94% and preventing estimated \$12M+ in breach costs
- Architected SAST/DAST pipeline reducing mean time to vulnerability detection from 23 days to 4.2 days across 180+ engineering teams; achieved 99.2% false positive suppression rate
- Designed custom WAF rules for GraphQL APIs blocking 2.3M+ attack payloads monthly (99.7% precision) while maintaining 99.95% legitimate traffic throughput

Stripe | *Application Security Engineer* 2021-2023

- Established threat modeling framework adopted across 12 product teams; completed 47 threat models discovering 156 design-level risks with 89% remediation rate within SLA
- Reduced payment API latency from 18ms to 12.4ms (31% improvement) while adding comprehensive input validation; handled \$890B+ in annual transaction volume with zero authentication bypasses
- Built automated secrets detection system scanning 2.1M commits/month across monorepo; prevented 23 incidents preventing exposure of AWS/payment processor credentials

Wise | *Security Engineer (Application Security Focus)* 2019-2021

- Led incident response for 8 critical vulnerabilities in payment reconciliation services affecting 4.2M+ user accounts; achieved 100% remediation in 6.5 hours average MTTR
- Implemented OAuth 2.0/OIDC authentication overhaul serving 180+ API clients; reduced authentication-related incidents by 87% while decreasing token validation latency by 15.3ms
- Conducted 52 secure code reviews across fintech Python/Golang codebases; trained 34 engineers achieving 78% reduction in OWASP Top 10 findings in subsequent sprints

Palantir Technologies | *Security Intelligence Analyst (Contract)* 2018-2019

- Analyzed 340+ data pipeline configurations identifying 67 privilege escalation pathways; remediation roadmap prevented estimated 12 high-impact incidents based on threat intelligence correlation
- Developed Python framework for automated SQL injection pattern detection across distributed systems achieving 94.2% recall with 98.1% precision on 180K+ query samples
- Conducted red team assessment of access control matrices across 18 internal platforms; discovered 23 logic flaws including IDOR and broken function-level access control allowing lateral movement

PROJECTS

VulnRadar | *Python, FastAPI, PostgreSQL, Kubernetes, YARA Rules* 2022-Present

- Open-source runtime vulnerability scanner for containerized applications; 2,840+ GitHub stars, 280K+ monthly downloads; detects 340+ CVE patterns with 92.3% true positive rate

- Implemented adaptive ML-based anomaly detection reducing scan time by 68% (from 240s to 77s per image) while maintaining 99.1% vulnerability coverage accuracy

CryptoShield | *Rust, C, LLVM, OpenSSL, TLS 1.3* 2021-2023

- Cryptographic vulnerability detection library for C/C++/Rust codebases; 1,240+ stars, 95K+ weekly downloads; identified 156+ real-world cryptographic misuse patterns in production systems
- Achieved sub-2ms analysis latency per 10K lines of code with zero false negatives on 45 OWASP crypto test cases; integrated into CI/CD pipelines for 40+ enterprises

AuthPulse | *TypeScript, Node.js, Next.js, OAuth 2.0, SAML 2.0* 2020-2022

- Reference implementation and testing harness for OAuth 2.0/OIDC compliance; 1,680+ GitHub stars, 156K+ total clones; certified against 34 official OpenID Foundation test cases
- Provides 18+ pre-configured vulnerability scenarios with 99.7% accuracy in simulating real-world authentication attacks; used in security training by 12 Fortune 500 companies

EXTRACURRICULAR

Black Hat USA & OWASP Global AppSec | *Conference Speaker & Training Instructor* 2021-Present

- Delivered 8 talks on microservices security and API threat modeling to 2,400+ security practitioners; 2023 talk 'Zero-Trust Architecture for Polyglot APIs' achieved 4.8/5.0 attendee rating
- Designed 6-hour intensive workshop on runtime security and behavior-based anomaly detection; trained 340+ engineers with 89% reporting significant improvement in threat detection capabilities

OWASP Project Leadership & OSS Mentorship | *OWASP Top 10 Maintainer & Senior Mentor (Linux Foundation)* 2020-Present

- Co-maintained OWASP Top 10 2021 release guiding 45+ security researchers; document received 2.3M+ downloads and integrated into 180+ university cybersecurity curricula globally
- Mentored 12 junior security engineers through formal program; 11 mentees promoted to senior/lead roles within 18-24 months with average 34% salary increase

TECHNICAL SKILLS

Languages – Python, Rust, Go, TypeScript, Java, C, SQL, Bash

Technologies – OAuth 2.0, OIDC, SAML 2.0, TLS 1.3, AES-256, RSA, WebAuthn, FIDO2, Kubernetes, Docker, Apache Kafka, gRPC, GraphQL, REST APIs, JWT

Tools – Burp Suite Professional, OWASP ZAP, SonarQube, Snyk, Checkmarx, GitLab SAST, AWS Security Hub, Datadog, ELK Stack, Splunk, Threat Modeling (Microsoft Threat Modeling Tool), Wireshark, Metasploit
