

# Senior iOS Engineer

at Prism Labs — Transforming mobile experiences through elegant, performant iOS applications

San Francisco, CA (Remote) • Full-time • \$165,000 - \$215,000 USD

Prism Labs is seeking an experienced Senior iOS Engineer to lead the technical architecture and development of our flagship iOS application. You will own critical product features, mentor junior engineers, and drive architectural decisions that impact millions of user interactions. This role requires deep expertise in modern iOS development practices, including SwiftUI, reactive programming, and performance optimization. You'll work cross-functionally with product and design teams to ship polished, user-centric features while maintaining code quality and team standards.

## About the Company

Prism Labs is a Series B mobile-first SaaS platform company focused on building next-generation productivity tools for creative professionals. We serve over 50,000 active users across design, photography, and content creation industries. Founded in 2020, we're headquartered in San Francisco with a fully remote engineering team spanning 6 continents. Our mission is to create seamless, beautiful iOS experiences that empower creators to focus on their craft, not their tools.

## What You'll Own

1. Design and implement complex iOS features using SwiftUI and modern architecture patterns, ensuring scalability and maintainability across a rapidly growing codebase
2. Lead architectural decisions for critical product systems, including offline synchronization using Core Data and network layer optimization with URLSession
3. Mentor 2-3 junior iOS engineers through code reviews, pair programming sessions, and technical guidance, elevating team capabilities and ensuring best practices
4. Optimize app performance metrics including launch time, memory usage, and battery consumption; conduct profiling using Instruments and identify bottlenecks
5. Implement reactive data flows using Combine framework for predictable state management and improved testability across feature modules
6. Collaborate with backend teams to design robust APIs and handle edge cases in production, proactively addressing crashes and reliability issues
7. Establish and maintain iOS development standards, including Swift style guides, testing strategies, and deployment procedures for App Store releases

8. Lead sprint planning and technical grooming sessions for iOS-specific work, breaking down complex features into achievable tasks

## Required

- 5+ years of professional iOS development experience with a portfolio of shipped apps on the App Store
- Expert-level proficiency in Swift and fluency with both UIKit and SwiftUI frameworks
- Strong understanding of iOS architecture patterns (MVVM, VIPER, Clean Architecture) and ability to evaluate trade-offs
- Hands-on experience with Combine framework for reactive programming and asynchronous data handling
- Demonstrated expertise in Core Data or similar persistence layers for managing complex offline scenarios
- Proven mentoring experience with junior developers and ability to communicate technical concepts clearly

## Preferred

- Experience with performance profiling tools (Instruments, Xcode Debugger) and optimization of metrics like app launch time and memory footprint
- Familiarity with CI/CD pipelines, automated testing frameworks (XCTest, Quick/Nimble), and test-driven development practices
- Previous experience shipping features using advanced iOS frameworks such as WidgetKit, CloudKit, or NetworkExtension

## Technologies

Swift

SwiftUI

UIKit

Xcode

Combine

Core Data

URLSession

Grand Central Dispatch (GCD)

App Store Connect

## Perks & Benefits

- Competitive equity package (stock options) with early-stage growth potential
- Comprehensive health insurance (medical, dental, vision) covering 100% of employee premiums
- Unlimited paid time off with a minimum 15-day annual recommendation
- Professional development budget of \$2,000 annually for conferences, courses, and learning materials
- Fully remote work environment with flexible hours and quarterly in-person team retreats
- MacBook Pro and peripherals provided; upgrade cycle every 3 years
