

Director, Platform Engineering

CloudWeave Systems — Accelerating developer velocity through intelligent platform automation

Location	San Francisco, CA (Hybrid)
Employment Type	Full-time
Compensation	\$280,000 - \$420,000 + equity

The Opportunity

We seek an experienced Director of Platform Engineering to lead our platform infrastructure organization. In this strategic role, you will oversee a team of 12-15 senior and staff engineers building Kubernetes-native internal developer platforms, managing our multi-cloud infrastructure, and architecting the next generation of our platform-as-a-service offering. You will report directly to the VP of Engineering, own platform engineering roadmap alignment with company OKRs, mentor engineering managers, and drive architectural decisions that serve both our internal teams and customer deployments. This role requires deep technical expertise, proven ability to scale and lead high-performing teams, and vision for how modern platform engineering shapes organizational velocity.

About CloudWeave Systems

CloudWeave Systems is a Series B infrastructure software company dedicated to building next-generation internal developer platforms (IDPs). We help enterprise engineering teams reduce deployment friction, increase developer autonomy, and scale infrastructure management without proportional growth in platform teams. Founded in 2021, CloudWeave serves over 150 mid-to-large enterprises across fintech, healthcare, and SaaS sectors.

Day-to-Day

- Lead, mentor, and develop a team of 12-15 platform engineers and engineering managers, including 1:1 management of 2-3 direct manager reports and dotted-line oversight of principal-level IC platform architects
- Define and execute the 18-month platform engineering roadmap in collaboration with VP of Engineering, Product, and Customer Success teams; establish quarterly OKRs and align team velocity metrics
- Architect strategic initiatives including Kubernetes-based multi-tenant customer environments, Terraform-managed infrastructure-as-code practices, and Backstage-powered developer portals at scale
- Conduct architectural reviews on critical platform components, establishing best practices for Helm charts, GitOps workflows, observability patterns, and Go/Python microservice deployments
- Drive engineering excellence through hiring, leveling frameworks, compensation reviews, and career development programs; build organizational capacity to support 3x platform growth
- Partner with VP of Engineering on organizational design, resource allocation, and talent acquisition for platform team expansion across US and future EMEA region

- Own platform reliability and operational excellence metrics (uptime SLOs, incident response times, MTTR); establish blameless postmortems and drive infrastructure hardening
- Lead cross-functional initiatives with Product and Sales teams around platform scalability requirements, customer success metrics, and competitive positioning in the IDP market
- Represent platform engineering in technical due diligence processes, board updates, and strategic vendor evaluations (Datadog, PagerDuty, Terraform Cloud partnerships)

You Have

- 10+ years of software engineering experience with 5+ years in platform, infrastructure, or DevOps engineering roles
- 3+ years of direct people management experience, including proven track record of growing, mentoring, and promoting engineering teams to senior levels
- Deep hands-on expertise in Kubernetes architecture, multi-cluster orchestration, and container networking (CNI/service mesh experience preferred)
- Proficiency with Infrastructure-as-Code tooling, specifically Terraform; experience managing multi-cloud infrastructure (AWS/GCP/Azure) and GitOps workflows
- Demonstrated expertise building or operating large-scale internal developer platforms, CI/CD infrastructure, or developer experience tooling
- Strong systems design and architectural thinking; ability to evaluate and recommend technologies like Backstage, Argo CD, Vault, and Prometheus at organizational scale
- Experience with Go and/or Python for infrastructure automation, tooling development, or platform services
- Ability to communicate technical strategy and trade-offs to executive leadership, boards, and cross-functional stakeholders

Bonus

- Experience at a Series A-C infrastructure or platform software company, or at a large tech company building internal platforms for thousands of developers
- Hands-on contribution to open-source infrastructure projects (Kubernetes, Terraform, Backstage, or similar ecosystems)
- Background in Site Reliability Engineering (SRE) with experience establishing SLOs, observability, and on-call practices
- Familiarity with Helm, ArgoCD, Flux, or other advanced Kubernetes deployment patterns in production multi-tenant environments
- Experience with security and compliance requirements in highly regulated industries (fintech, healthcare) at platform scale

Our Stack

Kubernetes (multi-cluster management, networking, RBAC)

Terraform & HCL (infrastructure-as-code, state management)

Backstage (developer portal, service catalog, scaffolding)

Go (platform services, tooling, operators)

Python (automation, infrastructure scripts, observability)

Helm (package management, templating, GitOps)

ArgoCD (continuous deployment, GitOps orchestration)

HashiCorp Vault (secrets management, PKI)

Prometheus & Grafana (monitoring, alerting, observability)

PostgreSQL (metadata stores, state management)

What We Offer

- Competitive salary + equity package (0.25%-0.50% depending on background) with quarterly refresh cycles
- Comprehensive health insurance (medical, dental, vision) with 90% premium coverage for employees and dependents
- 401(k) matching (4% vesting over 4 years) and financial planning support via Fidelity
- \$8,000 annual professional development budget (conferences, training, certifications; rollover allowed)
- Flexible work arrangement (hybrid 3 days/week onsite in SF; fully remote approved for right candidates)
- Generous PTO (unlimited accrual, minimum 20 days encouraged) plus 10 company holidays and 1 week winter shutdown
- Parental leave (16 weeks primary, 12 weeks secondary) and fertility/adoption support
- Mental health support (Ginger coaching, BetterHelp access), wellness stipend (\$1,500/year), and on-campus gym
- Home office setup stipend (\$2,500) and equipment reimbursement for remote-friendly setup

Apply

Submit a resume, cover letter (1 page), and optionally a link to your GitHub or technical blog via our careers portal at careers.cloudweave.io/director-platform-engineer. Include a brief statement on your leadership philosophy and key infrastructure/platform decisions you've led at scale. We also recommend including a reference from a technical peer or former direct report. Recruitment pipeline: initial screen (30 min, recruiter) → technical deep-dive (90 min, VP Engineering + staff engineer) → leadership & culture (60 min, CEO + head of people) → offer. We move quickly for strong candidates and can complete full loop within 2 weeks.
