

Director of QA Engineering

at VerifyTech Solutions — Ensuring software excellence through intelligent, scalable QA innovation

San Francisco, CA (hybrid) • Full-time • \$280,000 - \$420,000 USD

VerifyTech Solutions seeks an experienced Director of QA Engineering to lead our growing QA organization through the next phase of scaling and innovation. You will oversee a team of 15-20 QA engineers, managers, and automation specialists, defining testing strategy, driving architectural improvements to our testing frameworks, and ensuring our clients receive world-class quality assurance services. This role demands strategic thinking, strong people leadership, and deep technical expertise in modern testing technologies. You'll collaborate closely with product, engineering, and operations leadership to embed quality into every stage of the software development lifecycle.

About the Company

VerifyTech Solutions is a rapidly growing software quality assurance and testing automation company founded in 2015. We empower mid-market and enterprise clients across fintech, healthcare, and e-commerce to deliver bug-free, high-performance applications through cutting-edge testing frameworks, continuous integration pipelines, and intelligent test automation. With 200+ employees and offices in San Francisco and Austin, we're committed to transforming how organizations approach quality engineering.

What You'll Own

1. Lead, mentor, and develop a team of 15-20 QA professionals, including 2-3 QA managers and individual contributors at various levels; establish career paths and conduct performance reviews
2. Define QA strategy and roadmap aligned with company objectives, including framework modernization, shift-left testing initiatives, and cost optimization across testing infrastructure
3. Architect and oversee the evolution of the testing tech stack (Playwright, Cypress, Selenium, Postman, custom Python/JavaScript frameworks) to ensure scalability and maintainability
4. Build and maintain robust CI/CD test pipelines integrating with Jenkins, GitHub Actions, and cloud platforms; ensure 24/7 reliability and sub-minute feedback loops
5. Drive quality metrics definition and reporting; establish KPIs for test coverage, defect escape rates, and testing efficiency across all client engagements

6. Partner with VP of Engineering and Product leadership to implement quality gates and shift-left testing practices across the product development organization
7. Oversee budget planning, vendor management, and tool licensing for testing infrastructure; evaluate and adopt emerging technologies to maintain competitive advantage
8. Lead recruitment, onboarding, and knowledge transfer initiatives to scale the QA team; build a culture of continuous learning and technical excellence
9. Conduct quarterly business reviews with key enterprise clients; present testing insights, quality trends, and strategic recommendations to executive stakeholders

Required

- 12+ years of QA engineering experience, with minimum 5+ years in people management or director-level leadership roles managing managers
- Deep hands-on expertise with multiple test automation frameworks (Playwright, Cypress, and/or Selenium); proven ability to architect scalable test solutions
- Strong proficiency in scripting/programming (Python or JavaScript) to design testing utilities, custom reporters, and test infrastructure components
- Expert-level knowledge of CI/CD pipelines, containerization (Docker), and cloud testing platforms (AWS, Azure, or GCP)
- Demonstrated experience building and scaling QA teams; track record of recruiting, developing talent, and creating high-performing engineering cultures
- Executive presence and ability to communicate complex technical concepts to non-technical stakeholders and C-level executives

Preferred

- Experience with advanced testing methodologies (behavior-driven development, property-based testing, chaos engineering)
- Familiarity with API testing tools (Postman, REST Assured) and performance/load testing frameworks
- Background in agile/scrum methodologies and experience implementing quality-first practices in fast-moving environments
- Track record of cost optimization in testing infrastructure and tool management across large organizations

Technologies

Playwright

Cypress

Selenium

Postman

Python

JavaScript

Jenkins

GitHub Actions

Docker

AWS

Perks & Benefits

- Competitive equity package (stock options) with 4-year vesting
- Comprehensive health insurance (medical, dental, vision) with company subsidies covering 90% of premiums
- Unlimited PTO plus 12 paid company holidays and parental leave (16 weeks for birth parent, 12 weeks for non-birth parent)
- Professional development budget (\$5,000/year) for certifications, conferences, and training programs
- Flexible hybrid work (2 days minimum in-office, rest remote) with fully equipped home office stipend (\$2,000 one-time)
- 401(k) plan with 4% company match, immediately vested
- Annual performance bonus (15-25% of base salary based on company and individual metrics)
- Mental health support including subsidized therapy and wellness programs; on-site gym access and yoga classes

Next Steps

To apply, submit your resume, a cover letter describing your leadership philosophy and approach to scaling QA teams, and optionally a portfolio of QA frameworks or testing infrastructure you've architected to careers@verifytechsolutions.com. Applications will be reviewed on a rolling basis. Final candidates will complete a technical panel interview with our VP of Engineering and two senior QA leads, followed by an executive interview with our CEO.
