EDUCATION

- University of Waterloo** | *Bachelor of Computer Science, Honours Co-op* 2018 - 2022
- Achieved Dean's List distinction for 3 consecutive years with GPA 3.8/4.0 in core computer science courses
 - Led open-source contributions with 50+ pull requests to Apache Kafka, focusing on performance optimization
- Georgia Institute of Technology** | *Master of Science in Computer Science (Specialization: Distributed Systems)* 2022 - 2023
- Graduated with distinction; thesis on distributed cache invalidation strategies published at ACM symposium with 1,200+ citations
 - Completed 3 graduate research assistantships building scalable microservices handling 50K+ requests/sec

EXPERIENCE

- Stripe** | *Backend Engineer II* Jan 2024 - Present
- Architected payment reconciliation microservice processing 2.5M+ daily transactions, reducing payment settlement latency by 35% and saving \$1.2M annually in fraud losses
 - Optimized database query performance for transaction ledger service, decreasing p99 query response time from 850ms to 120ms and improving throughput by 280%
 - Led migration of legacy payment gateway from monolith to event-driven architecture using Kafka, enabling 40+ new payment methods with zero downtime
- Datadog** | *Senior Software Engineer, Infrastructure* Aug 2022 - Dec 2023
- Designed and deployed distributed log aggregation pipeline processing 500B+ events daily, handling 45% higher volume than previous system with only 12% additional resources
 - Implemented automatic index retention policies reducing storage costs by \$800K/year while maintaining 99.95% query SLA
 - Mentored 5 junior engineers and reviewed 200+ pull requests, establishing coding standards that reduced production incidents by 28%
- Notion** | *Backend Engineer* Jun 2021 - Jul 2022
- Built real-time collaborative editing backend serving 2.5K+ concurrent users per instance with <50ms latency, utilizing WebSocket connection pooling and Redis pub/sub
 - Engineered block versioning system reducing database storage footprint by 66% through incremental delta compression, allowing 10x larger workspace support
 - Contributed 12 production features across payments, workspace management, and API teams; code approved with 0 post-deployment rollbacks

PROJECTS

- QueryVault** | *Go, PostgreSQL, Redis, gRPC, Docker* Mar 2023 - Sep 2023
- Engineered distributed query caching proxy supporting 50K+ concurrent connections with automatic cache invalidation, reducing downstream database load by 72%
 - Implemented intelligent query routing and connection pooling that improved application query latency by 240% under high concurrency
- ChronoStream** | *Rust, Apache Kafka, Prometheus, Kubernetes* Oct 2022 - Feb 2023
- Developed time-series event streaming framework processing 1M+ events/sec with exactly-once semantics, achieving 99.99% uptime in production deployment
 - Reduced memory footprint by 45% through ring buffer optimization and achieved 3x faster throughput compared to existing solutions
- AuthFlow** | *Node.js, TypeScript, PostgreSQL, OAuth 2.0* Nov 2021 - Mar 2022
- Built OAuth 2.0 and SAML authentication service supporting 20+ identity providers, securing access for 100K+ users across 150+ organizations
 - Implemented token rotation and session management reducing unauthorized access incidents by 95%
- MetricsCollector** | *Python, InfluxDB, Grafana, AWS Lambda* Jan 2021 - Jun 2021
- Created serverless metrics aggregation platform collecting 500M+ data points daily with 0.8s average latency, scaling from 10 to 500+ monitoring endpoints
 - Optimized ingestion pipeline reducing costs by 52% through batching and compression techniques

EXTRACURRICULAR

- Systems Design & Distributed Computing Community** | *Co-Organizer & Mentor* 2023 - Present

- Mentored 15+ junior backend engineers through monthly architecture deep-dive sessions covering consensus algorithms, sharding patterns, and failure recovery
- Organized quarterly distributed systems hackathons attracting 200+ participants with live judging of microservices designs

Cloudflare Workers Open Source Initiative | *Active Contributor & Technical Speaker* 2022 - Present

- Contributed 8 production-grade edge computing examples with 2,500+ GitHub stars, focused on real-time data processing at network edge
- Delivered talk on 'Serverless Backend Patterns' at London Backend Developers Conference 2024 to 350+ attendees

TECHNICAL SKILLS

Languages – Go, Python, TypeScript/JavaScript, Rust, SQL, Java

Technologies – Apache Kafka, PostgreSQL, Redis, MongoDB, gRPC, REST APIs, WebSockets, Microservices Architecture, Docker, Kubernetes, Event-Driven Systems, Distributed Systems, GraphQL

Tools – Git, GitHub, AWS (EC2, S3, Lambda, RDS), Google Cloud Platform, Prometheus, Grafana, DataDog, ElasticSearch, CI/CD (GitHub Actions, Jenkins), Linux, Postman
