[in/AliceControl](#)

[github](#)

Final-year Computer Science student at University of Manchester with strong software engineering fundamentals in full-stack development, data engineering, and cloud infrastructure. Proven track record delivering production-grade systems across multiple technology stacks, from ETL pipelines to mobile applications. Passionate about clean code, automation, and building scalable solutions that solve real-world problems.

Experience

Software Engineer at Company 1 — Jun 2025 – Aug 2025

London, United Kingdom

- Built end-to-end ETL pipeline for coal market data using Apache Airflow, automating manual processes and enabling daily price forecasting.
- Developed CI/CD pipeline using Argo Workflows and Docker, enforcing 80% test coverage and reducing deployment time by 30 minutes.
- Integrated Bitbucket webhooks to enable continuous delivery on Amazon EKS, supporting production deployments.

Software Engineer Intern, Sunway Group — Jun 2024 – Sep 2024

Edinburgh, UK

- Built Selenium automation system for web crawling and energy bill processing, reducing manual effort by 73%.
- Developed FastAPI endpoints for authenticated access with Google Cloud cron integration and Cloudflare tunnelling.
- Engineered PyTesseract PDF extraction pipeline storing data in MongoDB, improving bill monitoring efficiency by 64%.

Cloudflare tunnelling for secure access. — Mar 2018 – Present

- Maintained secure remote access infrastructure using Cloudflare tunnelling for production systems.
- Configured authentication protocols and access controls across cloud-based endpoints.
- Ensured continuous operational security and monitoring of tunnel connectivity for critical services.

Projects

Mobile Payment SDK — Jun 2021 – Apr 2024

- Engineered secure payment processing SDK with encrypted transaction handling and multi-platform compatibility.
- Integrated tokenisation and fraud detection mechanisms, reducing payment failures by automating validation workflows.

Automated CI/CD Deployment Tool — Nov 2020 – Nov 2023

- Designed automated CI/CD pipeline orchestrating build, test, and deployment stages across containerised environments.

- Implemented webhook-driven automation reducing manual deployment overhead and enabling rapid release cycles.

EmergencyGo! — Feb 2024 – Mar 2024

- Developed mobile emergency response application with real-time location tracking and alert distribution capabilities.
- Integrated cloud backend infrastructure supporting multi-user collaboration and incident data persistence.

Distributed Load Balancer — Sep 2021 – Jun 2024

- Implemented distributed load balancing system using consistent hashing to optimise traffic distribution.
- Achieved high availability through fault-tolerant architecture supporting dynamic server scaling.

E-commerce Microservices — Apr 2020 – Jul 2023

- Built scalable microservices architecture for e-commerce platform using Node.js and MongoDB.
- Deployed containerised services on Kubernetes, enabling independent scaling and deployment of business domains.

Education

BSc Computer Science, University College London — Sep 2023 – Jun 2026

London, United Kingdom

Final Year Project — Sep 2015 – Nov 2020

Birmingham, UK

Skills

Spring

React

Node.js

MongoDB

SQL

JavaScript

MySQL

Firebase

FastAPI

Azure

TypeScript

C

Pandas

Processing

Java

Kotlin

Python

C++

Django
