github

Final-year Computer Science student at Imperial College London with demonstrated expertise in full-stack development, mobile applications, and systems programming. Experienced across modern frontend frameworks (Flutter, Next.js, React) and backend platforms (Firebase), with strong foundations in low-level systems work including compiler design and operating system implementation.

Experience

Full-Stack App Developer — Jun 2025 – Present

Bristol, UK

- Architecting cross-platform mobile application using Flutter and Firebase, defining technology stack and system design decisions.
- Developing core features including chronological post-saving functionality to enhance user engagement and data persistence.
- Leading full-stack implementation from frontend UI through backend infrastructure for investor-ready pitch-stage application.

Firebase as the backend — Dec 2021 – Present

- Deployed Firebase infrastructure supporting multi-platform applications with real-time data synchronisation and authentication.
- Integrated Firebase backend services across three distinct projects, ensuring scalable cloud architecture and data security.
- Implemented Firestore queries and storage solutions optimised for responsive user experiences in production applications.

Projects

QuickMed — Jul 2025 – May 2024

Flutter, Dart

- Developed medical-grade mobile application enabling NFC tag data transfer for humanitarian crisis scenarios during hackathon.
- Implemented JSON serialisation and deserialisation for secure medical data loading, storage, and interoperability.

Readventure — May 2025 – Jun 2025

NextJS, React, TypeScript, TailwindCSS, Firebase, GitLab CI/CD

- Built interactive story web application with choice-based narrative mechanics to improve children's reading engagement and retention.
- Engineered genre-based filtering system and implemented CI/CD pipeline for reliable deployment and code quality assurance.

Analytics Dashboard — Jan 2020 – Aug 2024

- Designed and implemented data visualisation dashboard using Python and Matplotlib for business intelligence reporting.
- Processed and analysed large datasets to generate actionable insights presented through interactive graphical interfaces.

WACC Compiler — Jan 2025 – Mar 2025

Scala, Parsley, x86-64 Assembly, GitLab CI/CD

- Engineered compiler for WACC language featuring lexical, syntactic, and semantic analysis with x86-64 code generation.
- Optimised generated assembly code through peephole optimisations, improving performance of compiled executables.

Mobile Payment SDK — Nov 2021 – Sep 2024

- Developed secure payment processing software development kit supporting multiple platforms and payment methods.
- Integrated cryptographic security protocols and transaction verification systems ensuring payment data protection.

Education

BSc Computer Science — Sep 2023 – Jun 2027

Birmingham, UK

Skills

AArch64

C

C++

Dart

Firebase

Flutter

Haskell

Java

JavaScript

Matplotlib

Next.js

Python

React

Scala

SQL

TailwindCSS

TypeScript

Node.js

Django
