

CloudWeave Systems

Building scalable, distributed systems that power the modern data economy

INTERN BACKEND ENGINEER

San Francisco, CA (Remote-friendly) · Internship · \$28-\$35/hour

Join CloudWeave Systems as a Backend Engineer Intern and get hands-on experience building and maintaining scalable microservices. You'll work alongside senior engineers to develop REST APIs, implement data persistence layers, and contribute to our core platform services. This is an excellent opportunity to apply computer science fundamentals to real-world distributed systems while learning industry best practices in backend development.

ABOUT US

CloudWeave Systems is a San Francisco-based infrastructure software company founded in 2019. We specialize in developing cloud-native data platforms and microservices orchestration tools for enterprises. Our mission is to simplify distributed systems architecture and enable organizations to build reliable, high-performance applications. We serve Fortune 500 companies across finance, healthcare, and e-commerce sectors.

WHAT YOU'LL DO

- Develop and maintain REST APIs in Go and Python under the guidance of senior engineers
- Implement and optimize database queries using PostgreSQL and Redis for caching layers
- Participate in code reviews and learn best practices for writing maintainable, testable backend code
- Debug and troubleshoot issues in microservices running in Docker containers and Kubernetes
- Collaborate with the team to design and implement new features for our core data pipeline
- Write unit tests and integration tests to ensure code quality and reliability
- Document API specifications and internal services to improve team knowledge sharing

REQUIRED

- Currently pursuing or recently completed a degree in Computer Science, Software Engineering, or related field
- Strong foundation in at least one backend language: Python, Go, or Java
- Understanding of relational databases and SQL fundamentals
- Familiarity with Git and version control workflows
- Ability to work collaboratively in a team environment and communicate technical concepts clearly

NICE TO HAVE

- Experience with REST API design and HTTP fundamentals
- Exposure to Docker or containerization concepts
- Familiarity with microservices architecture or distributed systems concepts
- Previous experience with PostgreSQL or MySQL

TECH STACK

Go Python PostgreSQL Redis Docker Kubernetes REST APIs Git RabbitMQ Linux

BENEFITS

- Competitive hourly rate commensurate with experience
- Flexible work schedule with remote work options
- Mentorship from experienced backend engineers
- Free access to professional development courses and certifications
- Lunch and snacks provided in office (when on-site)
- Opportunity to work on real production systems impacting thousands of users

HOW TO APPLY

Submit your resume, a cover letter describing your interest in backend engineering, and a GitHub profile or portfolio link (if available) to careers@cloudweave.io. Include any personal or academic projects that demonstrate your backend development skills. Applications are reviewed on a rolling basis.
