EDUCATION

ETH Zurich (Swiss Federal Institute of Technology) | *MSc Computer Science - Systems & Networks* 2019 - 2021

- Specialized in distributed systems and cloud infrastructure with focus on Kubernetes and container orchestration
- Completed thesis on 'Optimizing Resource Allocation in Hybrid Cloud Environments' achieving distinction grade

University of Cape Town | *BSc Computer Science* 2015 - 2019

- Graduated with honors in systems programming and network architecture
- Elected class representative for software engineering cohort demonstrating leadership and communication skills

EXPERIENCE

Datadog | *Site Reliability Engineer II* March 2023 - Present

- Architected and deployed automated incident response system reducing mean time to resolution (MTTR) by 67% across 12 production clusters
- Implemented distributed tracing pipeline processing 2.3M events/second, improving service debugging efficiency by 4.5x
- Led migration of legacy monolithic monitoring systems to microservices architecture, reducing infrastructure costs by \$340K annually

Cloudflare | *SRE (Site Reliability Engineer)* July 2021 - February 2023

- Designed and maintained service mesh infrastructure serving 45M+ requests daily with 99.99% uptime SLA achievement
- Automated deployment pipeline using Terraform and GitOps reducing production deployment time from 2.5 hours to 12 minutes (87.5% improvement)
- Optimized database connection pooling strategy decreasing latency p99 by 340ms and increasing throughput capacity by 156%

Notion Labs | *Junior Site Reliability Engineer* November 2020 - June 2021

- Implemented comprehensive observability framework with Prometheus and Grafana reducing incident detection time from 18 minutes to 3 minutes
- Built automated chaos engineering tests using LitmusChaos validating resilience of 28 critical microservices with 94% fault detection accuracy
- Contributed to on-call runbook standardization effort reducing incident resolution variance by 52% across platform teams

PROJECTS

KubeWatcher | *Go, Kubernetes API, Prometheus, gRPC* 2022 - 2023

- Developed open-source Kubernetes observability tool with custom resource monitoring achieving 15K GitHub stars and 340+ community contributions
- Engineered efficient state reconciliation algorithm reducing memory footprint by 72% enabling deployment on resource-constrained edge clusters

FailSafe | *Python, Redis, Apache Kafka, Docker* 2021 - 2022

- Built distributed circuit breaker and retry framework processing 8M+ transactions daily with 99.95% reliability
- Implemented intelligent backoff strategies reducing cascading failures by 83% in microservice architectures under high load conditions

LogAggregator Pro | *Rust, Elasticsearch, Fluentd, Bash* 2020 - 2021

- Created high-performance log aggregation tool handling 500K logs/second with 3.2GB/hour data ingestion rate
- Optimized indexing strategy reducing query response time by 78% and storage requirements by 64% using compression techniques

AlertOptimizer | *Python, Machine Learning, Grafana, SQLite* 2022

- Developed ML-based alert deduplication engine reducing false positive alerts by 71% and alert fatigue by 85%
- Integrated with 12 major monitoring platforms generating actionable intelligence for 200+ enterprise customers

EXTRACURRICULAR

Cloud Native Computing Foundation (CNCF) | *Community Ambassador & Kubernetes Mentor* 2022 - Present

- Mentored 18 junior engineers on SRE best practices and Kubernetes administration resulting in 100% transition to mid-level roles
- Organized monthly technical meetups with 200+ attendees on topics including observability, incident response, and infrastructure automation

DevOps Europe Conference | *Speaker & Workshop Facilitator* 2023

- Delivered keynote presentation 'Scaling Reliability at Global Scale' reaching 800+ live attendees and 12K+ video views post-publication

- Facilitated hands-on workshop on Kubernetes security and compliance best practices with 120 participants achieving 92% satisfaction rating

TECHNICAL SKILLS

Languages – Go, Python, Rust, Bash, SQL, YAML

Technologies – Kubernetes, Docker, Prometheus, Grafana, ELK Stack, Apache Kafka, Redis, PostgreSQL, Elasticsearch, Terraform, Ansible, ArgoCD

Tools – Git, Jenkins, GitLab CI/CD, GitHub Actions, PagerDuty, DataDog, Splunk, VictorOps, New Relic, AWS (EC2, RDS, Lambda, EKS), GCP (GKE, Cloud Run), Linux/Unix
